# WyCom WySign

Save time, save money, and improve security with WySign: the simple, secure solution for automated cheque signing. WySign physically separates the cheque signing and printing functions for optimal security. And it eliminates the noise, messy signature plates and cumbersome operation of mechanical cheque signers — turning your desktop printer into a fast, secure and quiet check signer.

Extremely secure.

Signatures are encrypted on the WySign USB key, using custom signature backgrounds that discourage duplication or alteration. When it comes to controlling end user access, you make the call: choosing which users can create cheque overlays, sign cheques, or print reports.

Simple to set up.

A graphical interface eliminates the need to measure for signature alignment. Just print the WySign grid on your cheque and set up signature placement at a glance.

Easy to use.

Insert the WySign USB drive into any computer. Log in with a secure user name and password, choose your cheque overlay, specify how many cheques to sign, and WySign does the rest.

Simple to audit.

An audit log accounts for every cheque signed — so you always know who signed cheques, when, and which overlays and signatures they used.

Flexible.

Use the WySign USB key on any computer you choose, without installing software. WySign supports an unlimited number of cheque overlays and signatures, making it easy to customize cheque signing to your needs.

Printer-compatible.

WySign works with nearly any printer on the market — which means you can use it with nearly any printer in your office.
